Knowledge. Solutions. Success

Manage your Item Bank and Examinations with a simple, secure and integrated solution

ItemsOnweb

The system allows Authors, Reviewers, Directors and Administrators to develop and manage all activities associated with item composition and revision, thus creating an item bank. The creation of examinations then becomes possible with many variables available.

1 Create Items

Standardise the process of item authoring by incorporating ItemsOnWeb™. A flexible tool that provides everything needed to create the item bank in a controlled and secure manner, reducing time and effort and maximising results. ItemsOnWeb™ supports several item types and formats including subjective, digital and multiple choice items.

Subjective Items

Video Files

Digital Files

Objective items

Audio Files

2 Review Content

Streamline the item review process, collect valuable information faster, simpler, cheaper and more accurately.

Introduce a central repository to the organisation with evaluated items, accessible whenever and wherever they are needed. Allow experts to analyse the content and provide improvements and suggestions.

3 Compose Exams

Define and create your own exams within the tool. Exams can contain any item type from the item bank, allowing for the creation of mutliple test types, adapted to the institution and content requirements. After defining the exam, publish it to the associated candidates, defining the dates and times in which the examination will take place. ItemsOnWeb™ will automatically take care of managing the schedule, making the exams available to the correct candidates as defined.

ItemsOnweb

4 Enroll Candidates

ItemsOnWeb™ allows the candidate to be assigned to an exam. Candidate information can be imported using a template, or generated on demand. ItemsOnWeb™ will provide each candidate with a unique username to access the module and complete the corresponding exams.

5 Administer Exams

ItemsOnWeb™ allows institutions to make exams available to students on a web based module. Each assigned candidate will be provided with credentials to log in to the module. Once authenticated, students will receive the available exams. They will be able to begin and complete the exam providing the required answers in multiple formats (multiple choice, open-ended, images, files among others). ItemsOnWeb™ provides a secure channel to deliver and retrieve candidates' information, ensuring the security and integrity of information.

6 Get Reports

ItemsOnWeb™ provides multiple reports for each stage and process available in the application. Get valuable and calculated information regarding candidates' results, exam performance, item level statistical information, as well as item authoring, quality and user interaction within the process. Take advantage of the technology to improve and optimise your current process.

⭐ Add Value

Reduce time, effort, risks and logistics in the process while creating statistical validation, item standardisation, security, consistency and access to real-time information. Increase the quality of the content, improving the overall process with ItemsOnWeb™.

Many Reasons to incorporate ItemsOnWeb into your process

ItemsOnweb

Process Control

Be in control of all stages of the process at all times from any location. ItemsOnWeb™ provides for different levels for users to obtain different information, to track and follow up the overall process.

Availability of Information

Organise your work and activities by having the necessary information in the required time in one solution. Forget about combining multiple reports from different areas / solutions. Get all the information you need from ItemsOnWeb™.

Differential Matters

ItemsOnWeb™ is designed with the understanding that each institution is unique and it is fully adaptable to the institution's processes and standards. Experience how easy it is to incorporate ItemsOnWeb™ into your daily work and obtain immediate benefits.

Reduce Time and Efforts

Integrating ItemsOnWeb™ will reduce time and decrease costs, as it simplifies the item banking population and maintenance at the same time as providing a robust platform to deploy tests to candidates. Allowing the institution to incorporate updated technology in an efficient and logical way.

Authors, Reviewers, Subject Officers, Institution authorities and Candidates will be able to interact from their own locations.

User Friendly

ItemsOnWeb™ layout is simple and specifically designed for a pedagogical environment. The use of the solution requires minimal training as it is very intuitive, and users will enjoy simple interaction within the application.
