TeachOn

Efficient classroom management

TeachOn™ is a product specifically designed for instructors, teachers and professors to allow them to manage their individual classrooms. TeachOn™ is a tool that makes use of the best practices, ensuring that the users follow a methodology that will help them to organise their work, get calculated information, track and compare results; to identify particular questions or students needing reinforcement, increasing the quality of the teaching process and learner's results.

Define the Structure

TeachOn™ allows any institution to define a structure to comply with requirements. Each instructor will be able to generate grades / levels, subjects, modules; and create classes / courses adapting the taxonomy to the current one at the institution.

Design Exams

TeachOn™ allows instructors to compose exams using new or existing items in the item bank. Each instructor can define his own exams and assign the required students to them. TeachOn™ supports subjective items, multiple choice items, paragraphs, tables, drawings, fill in the blanks, images and graphs, among other formats.

Create Items

TeachOn™ provides an item bank organised according to the defined structure. Teachers will be able to generate and interchange items to be used later on, in an exam. TeachOn™ employs best practices ensuring that the item definition follows the minimum requirements of item composition therefore providing training and methodology to instructors to maintain the quality of the generated material.

Print Copies for candidates

TeachOn™ allows you to print the exams for the students on a standard laser printer using plain paper and ink. Assign the candidates to the exam, choose whether or not to identify the printed copies according to the candidate information and get the printed copies ready for the required date and time.

Tracking student performance and managing classrooms has never been easier!

Incorporate TeachOn™ in your institution's daily tasks and reduce administrative tasks that may lead to errors, consuming valuable time and distracting resources from core tasks.

Scan Responses

TeachOn™ has a scanning module that enables you to scan in the students' responses, using an image scanner, to generate all the required information to begin the marking process, from the scanned exams. Instructors are able to mark at any location, on their computers with no risk of losing or damaging papers.

Get Reports

TeachOn™ has a reporting tool that analyses the generated information and provides statistical, performance and result reports. The institution will easily identify a particular student's performance and even that of a classroom and / or instructor. Teachers will get valuable and accurate information to assist them to make changes in the teaching process, in order to maximise results.

Export Information

TeachOn™ can export reports and results in order to inform the institution or families of a student's progress and class room performance.

Mark responses

TeachOn™ allows instructors to assign the correct mark to student responses, generate a final mark, performance and statistical reports once the marking is completed. TeachOn™ provides commonly used annotations such as ticks and crosses. A digital copy of the marked exam, can be provided to the student.

Register attendance

TeachOn™ has an attendance register module that can compare the decrease in performance with the attendance records for a particular classroom or student. This makes it possible for the instructor to easily identify the origin of the issue and take action to rectify it.
